

GLV Business Flow Chart

Current rule: 75%+ paid

Pay small, own big - procurement only starts when the account reaches the configured threshold.

GLV Business Rules Behind The Flow

These rules keep reports aligned with the real cash movement of the business.

1. Customer accounts do not create immediate buying cost

The full product cost is exposure, but GLV does not buy every product immediately. This prevents reports from showing a false operating loss.

2. Procurement starts at the threshold

Products enter the procurement list only when customer accounts are at or above the configured threshold, currently understood as 75%+ paid.

3. Delivery clears procurement attention

After the product is bought and delivered, delivery confirmation removes it from procurement attention and supports completed-and-delivered reporting.

4. Cash position should follow real obligations

Operating Cash Position = Collected Cash - Procurement Due Now - Salaries Paid. Total Product Exposure remains visible but is not treated as immediate loss.

5. Staff performance should be cash based

If salaries are replaced with commission later, commission should be calculated on payments actually collected, not on expected receivables.

Recommended report wording

Use 'Operating Cash Position' for current cash health.

Use 'Total Product Exposure' only as risk visibility, not as immediate product cost.
